

Kanvaslight Illuminating Fabric

| January 24, 2022

There's a new way to illuminate your boat: With your marine fabric! The brand-new product by Guardtex called Kanvaslight, which recently won an IBEX Innovation Award, features a patented flexible, thin light that's integrated into the canvas. The fabric is packable, rollable and waterproof, so you can treat it just like your normal Bimini canvas. The fabric produces perfectly diffused light for entertaining underneath. It can be used in multiple applications, including Biminis, decor and sunshades. Kanvaslight is available in several sizes, and can also be customized to suit your dimensions. Guardtex works with Sunbrella, Surelast and other fabrics to offer a large choice of colors.
